

Lead Infectious Disease Scientist and Program Manager (QCRG at UCSF)

The Quantitative Biosciences Institute (QBI) at the University of California, San Francisco, is looking for a Lead Infectious Disease Scientist and Program Manager to facilitate the coordination of large collaborative scientific initiatives of the QBI Coronavirus Research Group (QCRG). Since its inception in 2019 as a collaborative research response to SARS-CoV-2, the QCRG has expanded its focus to diseases with widespread global impact or pandemic potential. Working with QBI Director Nevan Krogan, project PIs, and the QBI scientific leadership, you will design, oversee and coordinate infectious disease projects that are the collaborative effort of scientists across academic institutions, global collaborators, and industry partners.

Specifically, this position will:

- Provide scientific oversight including review and advice on study design, modeling, data analysis and validation, and suggesting new approaches.
- Launch new projects and provide strategic planning to our infectious diseases grant portfolio.
- Track progress toward project goals, facilitate coordination among participating partners, evaluate project data and results, and report project status to leadership
- Identify new funding opportunities, coordinate submission of new project proposals and preparation of manuscripts.
- Interface with stakeholders in academia and industry

This position requires a scientist qualified for independent research at the level of principal investigator. The QCRG is a highly dynamic and collaborative institute, applying disease agnostic technology such as proteomics and functional genomics, as well as biochemistry, computational biology, and bioinformatics to unravel the molecular networks underpinning host-pathogen interactions and developing targeted therapeutics. You will collaborate and interface with highly productive and an exceptionally collaborative group of scientists focused on detailed characterization of the biology and infection mechanisms of RNA viruses and other diseases with pandemic potential. Overall, you will contribute to further our understanding of the molecular mechanisms driving pathogenic diseases and discovering new avenues for therapeutics.

The ideal candidate should be independent, a creative problem solver, and original thinker. Excellent project management skills and a strong research record are essential, including evidence of publishing in high impact peer-reviewed journals and experience in writing and submitting proposals for federally sponsored research. Applicants will have strong written, verbal, and presentation skills and an ability to communicate and work in an interdisciplinary team environment. This position is for the job classification of Professional Researcher. It is not a faculty research position. Candidate's CV must list all Required Qualifications upon submission.

Required Qualifications:

- PhD in infectious diseases or related field
- Demonstrated high productivity and successful record publishing in high impact journals
- Demonstrated experience as a research project lead
- Experience managing collaborative projects among multiple laboratories
- Experience writing research proposals and peer-reviewed manuscripts for publication
- Experience managing direct research budgets
- Post-graduate training in the field
- Experience designing and executing viral assays, drug screening, and molecular biology and cell-based assays.

Preferred Qualifications:

- Experience with the biotech/pharma industry landscape
- A demonstrated track record of effectively using quantitative approaches to biological problems
- Understanding of large-scale proteomics data and placing it in a biological context

- Experience in handling large scale data
- Success in securing external research funding
- Experience teaching, mentoring, and advising students and trainees
- Community outreach, service to your profession, service to your institution

Applicant's materials must list (pending) qualifications upon submission. Applicants must meet all requirements by time of hire.

Please apply online at <https://aprecruit.ucsf.edu/JPF03877> with a CV, cover letter, and the contact information for 2 references.
